# CALOS

*Your ready-to-use partner*

Calos is the ultimate combination of state-of-the-art technology, maximum efficiency, operational safety and style. Its name Calos derives from the Ancient Greek word for aesthetics, synonym of the harmony, symmetry, naturalness and elegance.

## **SIMPLE INSTALLATION**

Calos is not just a boiler, it is an all-in-one plug and play heating unit. It includes all the necessary installation components pre-embed, such as a circulator, an expansion vessel, a safety valve, an automatic air vent and an automatic filling valve with a manometer.

## **MINIMUM FOOTPRINT**

Its solid metal construction of 0,7 x 0,35 x 1,9m, similar to a natural gas (CNG) boiler, guarantees minimum space requirements, allowing you to take advantage of the remaining space.

## **RAPID MAINTENANCE**

Its modular design consists of three removable snap-in parts, which allow easy, tool-free access to its internal mechanisms.

## **LOW EMISSIONS**

Its multiple flue gas paths guarantee the efficient cleaning of the flue gases, achieving minimum amount of ash and emissions to the atmosphere.

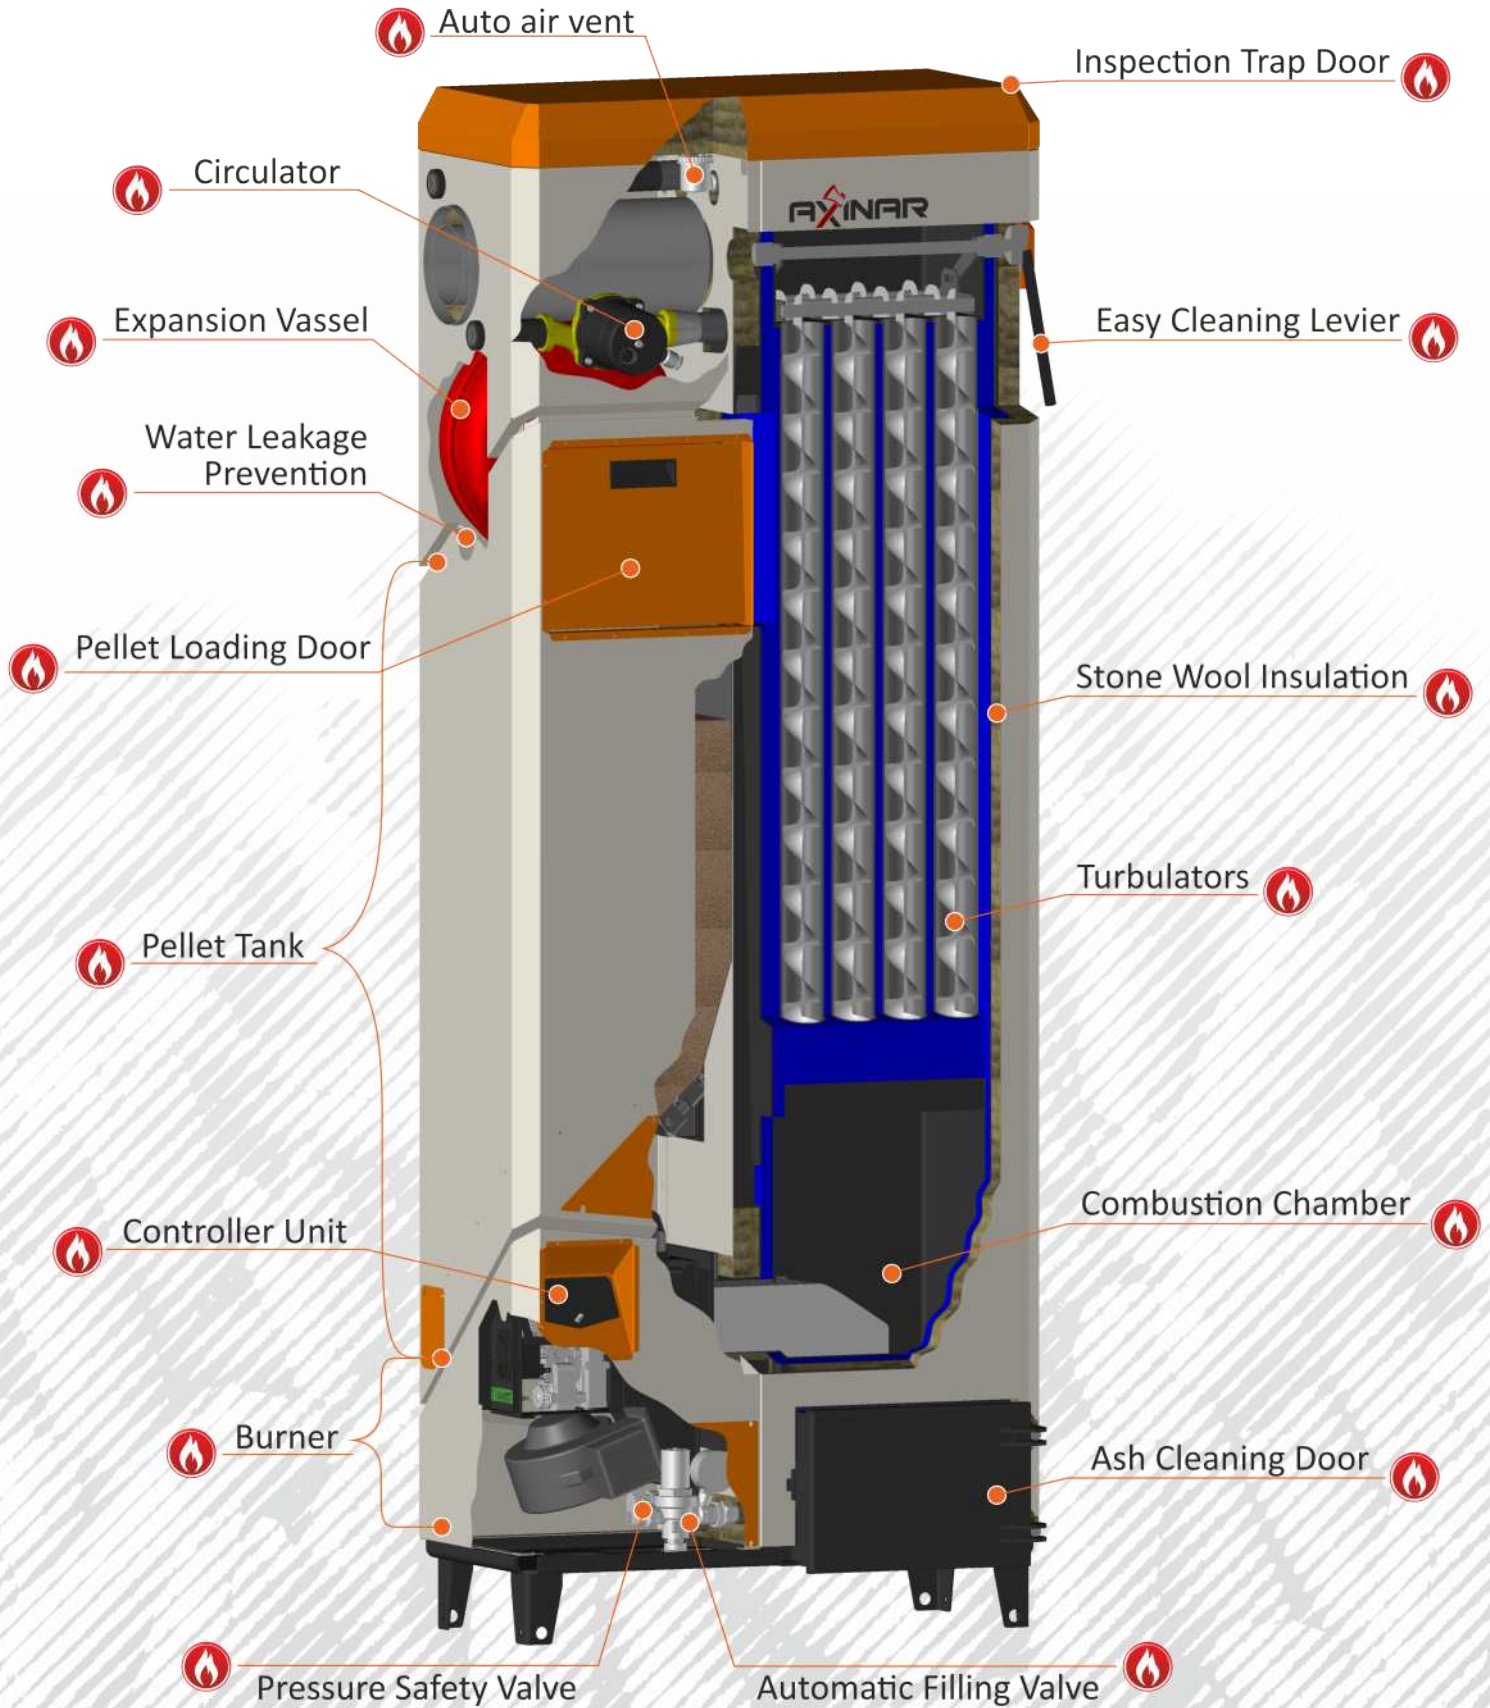

## **AUTO-CLEANING**

Calos is equipped with an automatic cleaning system with lever, which removes any excess ash from the boiler. The lever provides hassle free cleaning, keeping the heat exchanger clean at all times.

## **EASY CONTROL SYSTEM**

Calos comes with a convenient, user-friendly controller. You just have to plug it in to automatically activate it, with no need for further adjustment.
